FirstMatch™ Report

test test

Referral Status: Accepted

Recommended Program: Intensive Supervision Group Homes

Likelihood of Program Completion: 18%

Likelihood of Remaining Out of Care: 76%

Explanation:

The Likelihood of Program Completion represents the likelihood that test will successfully complete the recommended program and remain out of care for at least one year. The score was produced using the FirstMatch tool. FirstMatch considered multiple predictive factors to produce test's prognosis score. These factors could include test's YLS scores, CANS and FAST assessment factors, trauma history, age, legal status, family support and engagement likelihood, incarcerated caregiver or sibling, time since last living at home, mental health history/symptoms, substance abuse history, level of aggression, psychiatric hospitalizations, intellectual functioning, placement history, and AWOL history along with several other factors.

The FirstMatch tool compares test's predictive factors to the historical outcomes achieved by youth that have been through Intensive Supervision Group Homes and presented with similar combinations of predictive factors. The Intensive Supervision Group Homes provides a high fidelity program that uses interventions that have a demonstrated ability to replicate outcomes for the target population.

The FirstMatch tool recommends the program that has historically demonstrated the greatest success for youth with circumstances similar to test's within Adelphoi's continuum of care.

The FirstMatch tool is also used by Adelphoi to assist in the treatment planning process. Identifying and planning interventions for the needs and responsivity factors unique to test will help maximize test's success likelihood.

Additional information:

We hope this information is helpful to the court's process of identifying the most suitable program for test. Should you have any additional questions about this report, please contact our Admissions Director, Candice Rinaldi at (724)804-7013.
